Engineering Project

Project Name:	A video coding scheme based on spatio temporal and prediction
Description	The project is about “ A video coding scheme based on spatio temporal and prediction ” The theme of our project is concerned with the video part of Digital TV Transmission. The standards for MPEG2 and H264 define broad guidelines for video compression. But still recommend DCT for transform coding. In our project, we will design our own wavelets and implement them for transform coding. I have generated 3sets of movies with 100 frames in each movie. The frame rate is 40 per second.

Mini Project

Project Name:	GSM based system design for home automation
	By using GSM mobile we can switch OFF and switch ON any electronic devices like fan, motor, etc., but in our project we are using fan and motor electronic devices. If you are forgot to switch OFF the fan in your home. Just you can send the sms automatically it switch OFF the fan.

Description	Another application for our project is if anybody like thief enter into your home it send information to your mobile number that somebody enter into your home.
-------------	---
